

Position: Oracle Developer/ Functional Support Analyst

1/5/12

Location: Headquarters Office, Norcross, GA

Organization Description:

[Stratix](#) is a leader in enterprise mobility software and services, architecting the entire mobility infrastructure for companies needing to move and access mission-critical data to anyone, anywhere, anytime. From developing highly configurable rules-based Stratix Mobile applications to delivering and managing every mobile asset within an enterprise's mobile supply chain, Stratix delivers end-to-end mobility solutions that drive operational efficiency and improved customer service. Many of the world's Fortune 500 companies in Retail, Transportation & Logistics, and Field Service have chosen Stratix for application consulting, design and deployment of an integrated mobility ecosystem. Follow Stratix on Twitter at [Stratixmobile](#) or visit the Stratix Enterprise Mobility [Blog](#) at <http://mobilityblog.stratixcorp.com>.

Position Summary:

This "hands on" Developer / Functional person will design, write, code, set-up, configure, test, analyze and support Oracle R12 applications for depot repair, service contracts, order management, warehouse inventory and install base. The role requires development and code writing skills including application changes, scripts, screens, forms and customizations. Daily support functions and Oracle technical fixes ("tars") experience is required. This position is 85% technical and 15% functional.

Key Accountabilities:

- Developer, code writing, scripts, forms changes and customizations
- Debug new modules in a production environment
- Optimize and tweak current applications and screens
- Debug production issues and troubleshooting skills

Required Qualifications:

- Bachelor's Degree
- 5 years of hands-on experience minimum with Oracle R12, Broad Technical Knowledge
- 5years of hands-on experience with development and customizations
- Oracle R12 Contracts, WMS, Depot Repair, Istore, WIP, Discoverer and OEM contracts, including functional development/customization.
- Experience working with R12 Install Base and debug highly desirable.
- PL-SQL query experience and code development required
- Working knowledge and ability to use Microsoft Word and Excel on a daily basis
- Can meet assigned deliverables and deadlines while working on multiple concurrent tasks
- Clear and concise English language communication skills, both verbal and written
- Proven ability to interact effectively with end user and technical support teams.
