The role requires working closely with Business and Technical Analysts within a cross-functional team with frequent customer interaction.

Key Accountabilities:

- Create and establish QA processes in line with Agile software development
- Develop test plans, test cases, automated scripts and expected results
- Track round-trip data integrity from back-office system to Handheld
- Liaise with customers in defect identification and tracking
- Work with cross-functional teams in preparing for and executing tests

Required Qualifications:

- Associate / BS or BA degree in Computer Science or related field
- 2-4 yrs preferred exp. with test driven development and QA within agile development environment
- Experience with Agile tools and defect tracking systems
- Experience with Web and Portal software testing
- Experience with SQL databases and tools
- Hands-on experience testing complex, data driven enterprise software solutions
- Experience in Field Service solutions preferred, including bar code scanners and mobile printing
- Experience with Mobility enterprise solutions preferred
- Able to meet assignment deliverables and deadlines while working on multiple concurrent tasks
- Clear and concise verbal and written communication skills
- Interact effectively within a team environment
